

Samineni Chanikya Chowdary

Bapatla, Andhra Pradesh — chanikyachowdary86@gmail.com — +91 9392453073 — LinkedIn — GitHub

Summary

Computer Science undergraduate with hands-on experience in full-stack development, scalable backend systems, and real-time applications. Strong foundation in data structures, system design, RESTful APIs, and performance optimization for high-concurrency environments.

Technical Skills

Languages: Java, Python, C

Frameworks: React.js, React Native, Node.js, Express.js

Databases: MongoDB, MySQL

Core Concepts: Data Structures and Algorithms, System Design, Distributed Systems, REST APIs

Tools: Git, GitHub, Postman, Firebase

Additional: WebSockets, API Development, Scalability, Performance Optimization

Projects

- **SafeChat AI** React, Node.js, Machine Learning
 - Engineered an AI-based moderation system to detect toxic content with 85% classification accuracy
 - Scaled backend services to process over 1,000 messages per minute using asynchronous and event-driven architecture
 - Reduced average API response time by 30%, improving system responsiveness under sustained load
 - Maintained stable throughput with consistent latency during high-traffic usage scenarios
 - Live Demo
- **Real-Time Collaboration Platform** React, WebSockets
 - Designed and implemented a real-time collaborative editor supporting more than 10 concurrent users
 - Achieved synchronization latency below 200 milliseconds using WebSocket-based communication
 - Reduced data inconsistency issues by 30% through optimized state synchronization logic
- **Department Notification Application** React Native, Node.js
 - Developed a role-based notification system serving over 3,000 active users with secure access control
 - Decreased notification delivery time from several seconds to under 2 seconds using event-driven architecture
- **College Fest Platform** MERN Stack
 - Built a full-stack event management platform supporting more than 15,000 users across multiple events
 - Streamlined registration workflows, reducing manual coordination effort by 80% and minimizing errors
- **Face Recognition System** Python, OpenCV
 - Implemented a real-time face recognition solution achieving 90% detection accuracy
 - Improved processing efficiency by 25% through optimized image preprocessing and feature extraction

Experience

Web Development Intern AICTE

- Developed more than 10 reusable user interface components, reducing development time by 20%
- Improved application performance by 25% through efficient API integration and optimized state management
- Collaborated with team members to deliver features on schedule and improve code quality

Education

Bachelor of Technology in Computer Science and Engineering 2023–2027

Vignan's Foundation for Science, Technology and Research CGPA: 7.74

Publications

ML-Based Weather Forecasting (ICACRS)

Applied regression and time-series models to improve prediction accuracy and reliability

IEEE Publication Link

Achievements

First Place – National Hackathon — Second Place – AI Innovation Challenge

Vice President – Alumni Linkages (2025–2026)

Certifications

MERN Stack Development — Python (HackerRank) — PET Cambridge
